broncolor adapter for kobold daylight lamps simplifies the „crossover“

The new HDSLR cameras give creative photographers and videographers new perspectives and business models. They allow photographers to embrace videography and provide access to new techniques with handy and affordable equipment. Novel images can be created with less effort.

The new HDSLR camera generation is also suitable for stills and motion shooting at the professional level. To address new expectations with respect to light, the Swiss lighting specialist, Bron Elektronik AG, has developed an adapter. A large amount of broncolor reflectors can be mounted directly on kobold DW 200 / DW 400 daylight lamps. Therefore, photographers can also use their favourite light shapers with continuous light sources. The built-in UV safety glass suppresses UV-A and UV-B radiation. The present equipment will become even more versatile thus making the „crossover“ more cost-efficient.

This adapter connects the products of the brands broncolor and kobold in the true sense of the word.

Contact your broncolor and *kobold* dealer for further information or visit the websites www.broncolor.com or www.bron-kobold.com.
